BluPrint Oncology Concepts

Cover Letter

Dear Hiring Manager,

I am interested in applying for the position of Senior Medical Writer at BluPrint Oncology Concepts. Throughout my medical studies, extra-curricular activities, and scientific research participation, I have had the privilege to gain skills and knowledge in clinical research that I believe make me an ideal candidate for this position. I am committed to the field of medicine—and through research—I am confident that I can contribute positively and hope to make an impactful difference to your clinical research team and projects.

I am a recent medical graduate of Jagiellonian University Medical College with a Bachelor of Science in Biology and Bachelor of Arts in Psychology from Boston College. Through my studies, I have had the honor and privilege of working with some of the best researchers in the field of surgical anatomy and orthopedic surgery.

My participation in scientific research as a member of the International Evidence-Based Anatomy Working Group (iEBA-WG) and the Artromedical Orthopedic Clinic allowed gainful exposure and experience in medical writing in English. I was responsible for drafting and revising the manuscript for various projects that led to the publication of multiple articles at top journals. Inspired by the work ethic, creativity, and cooperation of my supervisors, senior research team leaders and members, I developed a sense of passion and curiosity in the art of scientific writing.

In my first role as project lead as a Senior Graduate Fellow for iEBA-WG, the team members and I published a systematic review and meta-analysis on the topic of anatomical variations of the greater palatine artery and foramen, in relation to their surrounding landmarks. In order to ascertain formal structure and knowledge in biomedical writing, I completed an online course called *Writing in the Sciences* at Stanford University, as well as *On Writing Well* by William Zinsser and *Essentials of Writing Biomedical Research Papers* by Mimi Zeiger. Through these readings, I was able to develop and refine a sense of scientific writing that allows for efficient drafting, effective communication of research concept, design and findings.

As a Research Fellow for Artromedical Orthopedic Clinic, I was able to diversify my writing capabilities by writing manuscripts of various study designs, such as technical note papers that introduced novel arthroscopic surgical techniques for various procedures, case-control studies, and case series and reports. Recently, in order to add to my doctoral research portfolio, I had the pleasure of working closely with team members on systematic review and meta-analysis papers that further sharpened my skills and knowledge of medical writing.

As Senior Medical Writer, the attributes I am certain to bring to your research team and projects are my work ethic, curiosity and passion towards research and writing, which I am confident will add substantial value to your company.

Sincerely,

Dong Woon Kim, MD
